

**Reliable, flexible
and stronger than ever**
We keep it all together

Dedicated to quality and strength

For many years, Julius Koch has been a leading global partner in the sun-screening industry. We develop and produce high-quality textile products for most types of blinds, and cords for all purposes. The extensive experience and specialisation has given us unique technical knowledge in the field, and we pass this on to our customers through our products and many product development cooperation projects. We supply products anywhere in the world. We have sales offices across Europe and production facilities with state-of-the-art machinery in Germany and Ukraine.

Durability is key

With the many impressive glass features in modern architecture, demand is growing for effective sun-screening and control of light and shade, where the solution can be easily varied and adjusted according to the conditions. Both indoors and outdoors, Venetian Blinds provide environmentally-sound screening against sunlight and heat. They reduce the need for air conditioning, and also reduce energy consumption in the building.

Naturally, products must be of an exceptionally high quality if they are to withstand the natural elements, day after day, year after year, outdoors and indoors. And no product is stronger than the weakest link, which is why durability is one of the most important properties when we are developing our textile articles.

All colours available on request

This brochure shows our standard range, which is only a few of the colour options. We are experts in colour matches and dye technology and naturally we can produce the exact colour you need. If you cannot find the colour you need in our brochure, please get in touch. We provide custom-dyed and tailor-made solutions on request, subject to our minimum order requirements.
